capsid proteins, VP1 (or A, 83 kd), VP2 (or B, 64 kd), and VP3 (or C, 61 kd). But because of uncertainties about the precise splice points in the transcripts, the exact starts, stops and (possible) intron boundaries are not known.

revision 4804 4870 a-65bp-a in [2]; aa in [1] [2] revises [1].

The genomes of MVMp and MVMi (immunosuppressive variant) have more than 96% of their sequence in common.

Data kindly reviewed (18-JUL-1986) by G. McMaster.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   coat protein; genome; origin of replication; overlapping genes; terminal repeat; unidentified reading frame. therapy. (Updated on 06-AUG-2003 to correct OS field.)

```
The present sequence is a parvovirus non-structure protein 1 (NS1) variant (TS45A) DNA fragment. The invention relates to the variants of the parvovirus non-structure protein (NS1) having a shifted equilibrium between the DNA replication and transcription activities, and the cytocoxidity activity. These variants are useful as toxins for treating tumoural diseases. The variant DNAs are useful as toxins for treating therapy. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                        NS1; non-structure protein 1; cytostatic; gene therapy; toxin; therapy; tumoural disease; gene therapy; mutant; mutein; variant; ds.

                                                                                                                          09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence is a DNA encoding parvovirus non-structure protein (NS1) variant (T463A). The invention relates to the variants of the parvovirus non-structure protein (NS1) having a shifted equilibrium between the DNA replication and transcription activities, and the cytocoxicity activity. These variants are useful as toxins for treating tumoural diseases. The variant DNAs are useful as vectors for gene therapy. (Updated on 06-AUG-2003 to correct OS field.)

The present sequence is a DNA encoding parvovirus non-structure protein (NS1) variant (T363A). The invention relates to the variants of the parvovirus non-structure protein (NS1) having a shifted equilibrium between the DNA replication and transcription activities, and the cyclocoxicity activity. These variants are useful as toxins for treating tumoural diseases. The variant DNAs are useful as vectors for gene

The present sequence is a wild type DNA encoding parvovirus non-
structure protein 1 (NS1). The present invention relates to the variants
of the parvovirus non-structure protein (NS1) having a shifted
equilibrium between the DNA replication and transcription activities, and
the cytotoxicity activity. These variants are useful as toxins for
treating tumoural diseases. The variant DNAs are useful as vectors for
gene therapy. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                NS1; non-structure protein 1; cytostatic; gene therapy; toxin; therapy; tumoural disease; gene therapy; mutant; mutein; variant; ds.

disease in animals,
                                                                                                                                                                                                                                                         Polypeptide obtd. by recombinant DNA methods - for vaccination against parvovirus infections in man and animals.
                                                                                                                                                                                                                                                                                                                                                 The inventors claim an immunologically active polypeptide for the development of vaccinal immunity against parvovirus infection. Also claimed are DNA sequences wholly or partly duplicative of defined sequences. The polypeptides are used in vaccines for conferring protection against parvovirus infections in man and animals. The invention relates to the variants of the parvovirus non-structure protein (NS1) having a shifted equilibrium between the DNA replication and transcription activities, and the cytotoxicity activity. These variants are useful as toxins for treating tumoural diseases. The variant DNAs are useful as vectors for gene therapy. (Updated on 06-AUG-2003 to correct OS field.)

```
trendated viruses are obtained by serial passage of the viruleme.

type 2b isolate 39 in NLFK feline kidney host cells. They have one or more of the sequence alterations indicated in the sequence relative to the sequence of a control (5th passage) wild-type CPV-2b (see AAT88320).

A claimed virus from the 65th passage) wild-type CPV-2b (see AAT88320).

A claimed virus from the 65th passage (deposited as ATCC VR 2528)

C contains all 6 mutations. The DNA from attenuated CPV strains (see also AAT88324) is used for the production of infectious molecular DNA clones, which, in turn, can be transfected into cells to generate master stocks of the virus. The attenuated viruses can be used in dogs as a vaccine to protect against feline panleukopenia virus and mink enteritis virus. The vaccines protect against the currently prevalent CPV-2b type (and all extant strains of types 2 and 2a), providing a long term immune response.

(NB. this sequence was created by adaptation of the wild-type CPV-2b
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1357 CTACAACATGTCAAATTTTTAGAATGCACGGATGGAATTGGATTAAAGTTTGTCACGCT 1415

passaging (60 times) of virulent canine parvoirus (CPV) type 2b isolate 39 in NLFK feline kidney host cells. The attenuated virus is designated 39 in NLFK feline kidney host cells. The attenuated virus is designated (see AAT88320) of the control (5th passage) wild-type CPV-2b. 2 Mutations are within the hairpin formed by the 3' terminal palindrome: the mutation at uncleotide 59 introduces an A into a G-C rich region within the tip of the hairpin, disrupting the base pairing in one of the 2 small internal palindromes within the palindromes within the palindrome. The DNA from attenuated CPV strains (see also AAT88321) is used for the production of infectious molecular DNA clones, which, in turn, can be transfected into cells to generate master stocks of the against CPV disease, or more generally in cats and minks to protect against feline panleukopenia virus and mink enteritis virus. The vaccines contect against the currently prevalent CPV-2b type (and all extant strains of types 2 and 2a), providing a long term immune response.
                                                                                                                                                                   Canine parvovirus DNA carrying specific attenuating mutation(8) - used as vaccines for protection against parvovirus and feline pan-leukopenia virus infections.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         1357 CTAGAACATGTCAAATTTTTAGAATGCACGGATGGAATTGGATTAAAGTTTGTCACGCT 1415

The present sequence represents the complete genome of Chlamydia trachomatis. Open reading frames (ORPS) of the genome encode polypeptides AAY36754-Y37949. The polypeptides can be used as vaccines against Chlamydia trachomatis. Antisense and ribozyme sequences can also be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            to control growth of the microorganism. Chiamydia trachomatis is responsible for a large number of diseases, e.g. eye diseases such as conventional trachoma, nonendemic trachoma, paratrachoma, and inclusion conjunctivitis; genital diseases such as nongonococcal uretritis, epidymitis, cervicitis, salpingitis, perihepatitis, bartholinitis; pneumopathy in breast feeding infants; and venereal lymphogranulomatosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    38590 AGAGCATGTAGATCTTTTACGAGTAGGGCTCGCAATATGCAAAATTTTGTCTTGCT 38646

                                                                                                                                                                                                                                                                                                                             This DNA sequence comprises the genome of virulent canine parvovirus type 2D (CPV-2b) isolate 39, obtained after 5 serial passages in NLFK feline kidney host cells. Purther passaging has yielded attenuated virus wB1440 (APCC VR 2489) (see AAT88324) from the 60th passage, and a claimed virus C see AAT88321) derived from the 65th passage (APCC 2528). These cespectively contain 4 and 6 mutations in comparison to the virulent 5th passage virus. The DNA from attenuated CPV-2b strains is used for the production of infectious molecular DNA clones, which, in turn, can be transfected into cells to generate master stocks of the virus. The attenuated viruses can be used in dogs as a vaccine to protect against CPV disease, or more generally in cats and minks to protect against felline panleukopenia virus and mink enteritis virus. The vaccines protect against the currently prevalent CPV-2b type (and all extant strains of types 2 and 2a), and provide a long term immune response. (Updated on 17-0CT-2003 to standardise OS field)

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             938,

                                                                                                                                                                                                                                                          Sequence 2, Application US/08336345

Patent No. 5814510

GENERAL INFORMATION:
APPLICANT: Parrish, Colin R.
APPLICANT: Gruenberg, Allen
APPLICANT: Gruenchael, Leland B.
TITLE OF INVENTION: Attenuated Canine Parvovirus Vaccine
NUMBER OF SEQUENCES: 2
CORRESPONDENCE ADDRESS:
ADDRESSEE: Pennie & Edmonds
STREET: New York
CITY: New York

Sequence 1, Application US/08647655

Patent No. 5865585

GENERAL INFORMATION:

APPLICANT: Parrish, Colin R.

APPLICANT: Carmichael, Leland E.

TITLE OF INVENTION: Attenuated Canine Parvovirus Vaccine

NUMBER OF SEQUENCES: 2

CORRESPONDENCE ADDRESS: 3

CORRESPONDENCE ADDRESS: 4

ADDRESSEE: Pennie & Edmonds

STREET: 1155 Avenue of the Americas
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           19; Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  STATE: NY

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Inter-Organ: immature ears; Sire, 1: Xba I; Site 2: Xba I; The vector was digested with XbaI and one mucleotide was added by fill in in the recessive 3' end. The genomic DNA was nebulized, end repaired, adaptor ligated and size fractionated using sephadex. The resulting fragments were between 0.8 and 3 kb and were cloned into the vector (:x/y reads in M13mpl9; .b/g reads in pUC19). The same ligation was transformed into DH5a.
                                                                                                                                                                                                                                                                                                                                                                                   604 bp DNA linear GSS 29-APR-2003

This sequence is from a Xenopus Gene Collection (XGC) library

constructed by Aaron M. Zorn.

cDNA was oligo dT primed from Sug of poly A+ RNA from neurula.

ECORI-NOII cut cDNA was then ligated into pCS107 with EcoRI at the

3. end and NoII at the 3' end.

Vector: pCS107; Site 1: EcoRI; Site_2: NotI

Host: Escherichia coli DH10B

CONSTRUCTED A Nigel Garrett.

CDNA was oligo dT primed from Sug of poly A+ RNA from tadpole embryos. ECGI-Not! cut cDNA was then ligated into pCS107 with ECGI at the 5' end and Not! at the 3' end.

Vector: pCS107; Site_1: ECGNI; Site_2: Not!

The invention relates to the variants of the parvovirus non-structure protein (NSI) having a shifted equilibrium between the DNA replication and transcription activities, and the cytotoxicity activity. These variants are useful as toxins for treating tumoural diseases. The variant DNAs are useful as vectors for gene therapy. (Updated on 06-AUG-2003 to correct OS field.)
cytotoxicity activity. These variants are useful as toxins for treating tumoural diseases. The variant DNAs are useful as vectors for gene therapy. (Updated on 06-AUG-2003 to correct OS field.)

                                                                                                                                                                                                                                                           The present sequence is parvovirus non-structure protein 1 (NS1) variant
                                                                                                                                                                                                                                                                               (T394A). The invention relates to the variants of the parvovirus non-structure protein (NS1) having a shifted equilibrium between the DNA replication and transcription activities, and the cytotoxicity activity. These variants are useful as toxins for treating tumoural diseases. The variant DNAs are useful as vectors for gene therapy. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                             Novel parvovirus non-structure protein variant, useful for treating tumoral diseases, has a shifted equilibrium between DNA replication and transcription activities, and cytotoxic activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

The present sequence is a parvovirus wild-type non-structure protein 1 (NS1). The present invention relates to the variants of the parvovirus non-structure protein (NS1) having a shifted equilibrium between the DNA resplication and transcription activities, and the cytoloxicity activity. They evariants are useful as toxins for treating tumoural diseases. The variant DNAs are useful as vectors for gene therapy. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                    Novel parvovirus non-structure protein variant, useful for treating tumoral diseases, has a shifted equilibrium between DNA replication and transcription activities, and cytotoxic activity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          NSI; non-structure protein 1; cytostatic; gene therapy; toxin; therapy; tumoural disease; gene therapy; mutant; mutein; variant.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is parvovirus non-structure protein 1 (NSI) variant (T463A). The invention relates to the variants of the parvovirus non-structure protein (NSI) having a shifted equilibrium between the DNA replication and transcription activities, and the cytotoxicity activity. These variants are useful as toxins for treating tumoural diseases. The variant DNAs are useful as vectors for gene therapy. (Updated on 06-AUG-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel parvovirus non-structure protein variant, useful for treating tumoral diseases, has a shifted equilibrium between DNA replication and transcription activities, and cytotoxic activity.

                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The inventors claim an immunologically active polypeptide for the development of vaccinal immunity against parvovirus infection. Also claimed are DNA sequences wholly or partly duplicative of defined sequences. The polypeptides are used in vaccines for conferring protection against parvovirus infections in man and animals. (Updated on 24-OCT-2003 to standardise OS field)
                                        The present sequence is parvovirus non-structure protein 1 (NS1) variant (S283A). The invention relates to the variants of the parvovirus nonstructure protein (NS1) having a shifted equilibrium between the DNA replication and transcription activities, and the cytotoxicity activity. These variants are useful as toxins for treating tumoural diseases. The variant DNAs are useful as vectors for gene therapy. (Updated on 06-AUG-2003 to correct OS field.)
                                                                                                                                                                                                                                                                                                                                                                      Sequence encoded by the double-stranded replicative form DNA of porcine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Polypeptide obtd. by recombinant DNA methods - for vaccination against parvovirus infections in man and animals.

The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention is useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABBS7137-ABB72072). The sequence data for this patent did not form part of printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             New isolated nucleic acid detection reagent for detecting 1000 or more genes from Drosophila and for elucidating cell signaling and cell-cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps

The invention relates to isolated polymucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain recombinant production of (II). The polymucleotides are also used and in recombinant production of (II). The polymucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal crivity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food pupplement. (II) and its binding partners are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polymucleotide sequences have applications in disqual conditions in disquances of the invention. Note: The sequence blad and conditions and to order types of data and products dependent on DNA and and can order expressions of the invention. Note: The sequence data for this parent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at the electronic format directly from WIPO at the will be printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess

Novel recombinant nucleic acid encoding proteinaceous molecule, useful for producing flavor, fragrance and/or biocontrol agent which is useful as food additive in processed food industry and as antimicrobial agent.

Disclosure; Page; 52pp; English

recombinant isopremoin activities compound synthesis muciescal actu and its protestatic, immunosuppressive, and virucide. The novel recombinant isopremoid bio-active compound synthesis nucleic acid is useful for producing flavour. Fragrance, and/or a bio-control agent, by transforming or transfecting a suitable host with the recombinant isopremoid bio-active compound synthesis nucleic acid, expressing the recombinant isopremoid bio-active compound synthesis nucleic acid in the presence of a suitable substrate, and optionally isolating the formed product. The isopremoid bio-active compound synthesis nucleic acid in the presence of a suitable substrate, and optionally isolating the formed product. The bio-control agent is useful as an anti-microbial agent, as a food additive in the processed food industry to modify the taste of syrups, iso-control agent for oral medications and vitamins, and for providing a flavour/aroma in beverages, including alcoholic beverages. The bio-control agent is also useful for enhancing or reducing flavour, aroma in products, and for the industrial synthesis of nature identical flavour/aroma substances and/or artificial synthesis of nature identical flavour/aroma substances and/or artificial synthesis and insects and/or plants and microorganisms, for products, hair conditioners, cleaning communities, personal care products and health care products, as a composition of a composition of the interaction between plants and insects and/or plante substance and/or plante substance and/or plante substance and/or plante substance and/or plante is useful as a molecular marker or diagnostic tool. The protein fragments is useful as a molecular marker or diagnostic tool. The protein fragmostic tool. The protein are products or composition of a composition of the novel acid is useful for the production of an antagonist e.g. an antibody or the functional equivalent which is useful for inhibiting the synthesis of the bio-control agent. A composition, containing the bio-control agent, is a pharmaceutical or nutraceutical, useful for augmenting or enhancing the aroma and/or taste of food or non-food products, and/or protection of food or non-food products against fungal contamination and/or preterion of pests, for the protection of stored products and for the prevention or reatment. Pre composition is also useful for the prevention or treatment of disease. The bio-control agent is useful as a degreasing solvent, plasticizer and dye carrier. The composition is useful for replacing potentially carrinogenic synthetic food additives currently capable of isoprenoid bio-active compound synthesis when provided with a suitable substrate under appropriate reaction conditions. The novel recombinant isoprenoid bio-active compound synthesis nucleic acid and its fragments is useful as a molecular marker or diagnostic tool. The protein of the novel recombinant isoprenoid bio-active compound synthesis nucleic replacing potentially carcinogenic synthetic food additives currently used. The composition is also useful for treating dental caries, dental plaque and skin disorders, and for immunosuppressive, anti-leukaemia and The invention relates to a novel isolated or recombinant nucleic acid its functional fragment, encoding a proteinaceous molecule essentially

The invention relates to a novel isolated or recombinant nucleic acid or its functional fragment, encoding a proteinaceous molecule essentially capable of isopremoid bio-active compound synthesis when provided with a suitable substrate under appropriate reaction conditions. The novel recombinant isopremoid bio-active compound synthesis nucleic acid and its protein have the following activites: pesticide, dermatological, cytostatic, immunosuppressive, and virucide. The novel recombinant isopremoid bio-active compound synthesis nucleic acid is useful for producing flavour, fragrance, and/or a bio-control agent, by transforming a transfecting a suitable host with the recombinant isopremoid bio-active compound synthesis acid, expressing the recombinant isopremoid bio-active compound synthesis nucleic acid in the presence of
                  compound synthesis nucleic acid or its protein is useful for the synthesis of monoterpen alochol linahool and sesquiterpene alochol nerolidol, and monoterpenoid. This sequence represents an H64 protein seed in the terpenoid biosynthesis method of the invention. NoTE: This sequence is not shown in the specification. It has been obtained from electronic data supplied with this specification from the European Patent Office.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel recombinant nucleic acid encoding proteinaceous molecule, useful for producing flavor, fragrance and/or biocontrol agent which is useful as food additive in processed food industry and as antimicrobial agent.
anti-retroviral treatment. The novel recombinant isoprenoid bio-active

cc a suitable substrate, and optionally isolating the formed product. The bio-control agent is useful as an anti-microbial agent, as a food additive in the processed food industry to modify the taste of syrups, cc ice-creams, frozen desserts, yogurts, confectionery and like products, as a flow a flavouring agent for oral medications and vitamins, and for providing additional flavour/aroma in beverages, including alcoholic beverages. The cc aroma, fragrance or scent of plants, natural products, and/or synthetic or aroma, fragrance or scent of plants, natural products, and/or synthetic or archificial products, and/or synthetic or archificial products, and/or synthetic correction between plants and insects indentical flavour/aroma substances and/or artificial flavour/aroma commencing or artificial flavour/aroma in commencing or artificial gent is also useful as a pest control agent is also useful as a pest control agent or substances. The bio-control gent is also useful as a molecular marker or diagnostic tool. The protein products, personal care products and health care products, as a disinfectant additive and in the preparation of a composition. The novel crecombinant isopenoid bio-active compound synthesis nucleic acid or its fragments is useful for the products and health care products, and antibody or creaming a pharmaceutical or nutraceutical, useful for inhibiting the synthesis of the aroma and/or taste of food or non-food products, and/or protection of the aroma and/or taste of food or non-food products, and/or protection of treatment of disease. The bio-control agent is useful for the biological control of pests, for the protection of stored products and for the prevention or treatment of disease. The bio-control agent is useful for treatment of disease. The bio-control agent is useful for the biological control or creatment of disease. The bio-control agent is manipulation is also useful for control as a degreasing or creatment of disease. The bio-control agent is manipulated by a products and dye carrie ; plague and skin disorders, and for immunosuppressive, anti-leukaemia and anti-retroviral treatment. The novel recombinant isopremoid bio-active compound synthesis nucleic acid or its protein is useful for the synthesis of monoterpene alcohol linalool and sesquiterpene alcohol nerolidol, and monoterpenoid. This sequence represents an H64 protein used in the terpenoid blosynthesis method of the invention. NoTE: This sequence is not shown in the specification. It has been obtained from electronic data supplied with this specification from the European Patent Gaps Human, chromosome mapping, gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder. 8; Score 48; DB 7; Length 580; Pred.                                                                                                                                                                                                                           The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PGR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal cutivity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders of sites expressing (II). (I) and (II) are useful for treating disorders polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and anino acid sequences. Ag600010-A8033377 represent novel human diagnostic amino acid sequences. Ag600010-A8033377 represent novel human diagnostic mino acid sequences. Ag600010-A8033377 represent novel human diagnostic datent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at [Tep. wipo.int/pub/published_pct_sequences]
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ô

The invention Fraces to an included acts compilately any one of the nucleic acid inhibits proliferation of a cell. Also included are:

(1) a vector comprising a promoter operably linked to the nucleic acid encoding a propose expression is inhibited by the antisense concoding a polypeptide whose expression is inhibited by the antisense concoding a polypeptide whose expression is inhibited by the antisense continued by the antisense continued or its fragment whose expression is inhibited by the antisense continued to polypeptide; (3) an antibody capable of specifically binding the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular proliferation or the activity of a gene in an operon required for proliferation or that has an activity against a biological pathway confirmed for proliferation, or that inhibits cellular proliferation; (8) identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene product lies or a gene on which the test compound that inhibits proliferation of an organism acts; (9) manufacturing an antibiotic; (10) profiling a compound; activity, (11) a culture comprising strains in which the extent compound that inhibits proliferation of an organism. The antisense mucleic acids are useful for proliferation of an organism. The antisense mucleic acids are useful for confidentifying proteins or screening for homologous nucleic acids required for for endidate modelic acids are useful for deach deach or the strains is present in a culture compound that inhibits for confidentifying the target of a compound that inhibits for collection of the strains in present in a culture compound that inhibits for collection of the strains is present in a culture acids are useful for dentifying proteins or screening for homologous nucleic acids required for proliferation to isolate condidate modelic acids required for actional and actional and actional actions are actived and actional actions and actional actions and actional actions are actived
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New antisense nucleic acids, useful for identifying proteins or screening for homologous nucleic acids required for cellular proliferation to isolate candidate molecules for rational drug discovery programs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               drug discovery programs, or for screening homologous nucleic acids required for proliferation in cells other than S. aureus, S. typhimurium, K. pneumoniae or P. aeruginosa. The present sequence is encoded by one of the target prokaryotic essential genes. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Cardiovascular system antigen; human; mouse; rabbit; goat; horse; cat; chicken; sheep; immunosuppressive; antiarthritic; vasotropic; dog; antirheumatic; antiproliferative; cytostatic; cardiant; neuroprotective;

Cardiovascular system antigens and their associated polynuclectides are useful in the diagnosis, treatment and prevention of various types of disorders in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. A pathological condition of adetermined by detecting the presence or a absence of a mutation in a cardiovascular system antigen polynuclectide. The treatable disorders include autoimmune diseases such as rheumatoid arthritis, the presentive disorders such as reoplasms of the breast or liver, cardiovascular disorders such as cardiac arrest, cerebrovascular cardiovascular disorders such as cardiac arrest, cerebrovascular disorders such as corneal infection, endocrine disorders such as glomentulonephritis and respiratory disorders such as satham and pleurisy. The polypeptides can also be used to aid wound healing, to prevent skin aging due to sunburn, committed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pot_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human; cardiovascular system related polypeptide; cancer; proliferative disorder; foetal abnormality; developmental abnormality; hamematopidetic disorder; AIDS; autoimmune disease; rheumatoid arthritis; inflammation; allergy; neurological disorder; Alzheimer's disease; Parkinson's disease; cognitive disorder; schizophrenia; asthma; skin disorder; psoriasis; sepsis; diabetes; atherosclerosis; cardiovascular disorder; angiogenic disorder; kidney disorder; endocrine disorder; pregnancy-related disorder;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New cardiovascular system related polynucleotides and polypeptides, useful for diagnosing, treating and/or preventing disorders of the cardiovascular system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match
